HELP OUT AND HAVE FUN!
SPRING CLEANING
CHORE CHART

When it’s time to do chores, you can probably think of a million things you’d rather do. But chores don’t have to be boring. Try using your imagination to make them more fun. You could pretend you’re an astronaut cleaning up space garbage in outer space. Or, ask your parents to time you to see how fast you can clean up your room. You might set a record!

As you get older, you’ll be ready to take on bigger jobs. Here are some ideas to help you get started:

**Ages 5 to 7:**
- Pick up toys.
- Put clothes in laundry hamper.
- Make the bed.
- Sweep floors.
- Clear dishes from the table.
- Empty wastebaskets.

**Ages 8 to 11:**
- Wipe down counters and tables.
- Set and clear the table.

**Age 12 and up:**
- Load and unload dishwasher.
- Mop and vacuum floors.
- Put away groceries.
- Water plants and pull weeds.

Show your parents how helpful you can be by helping out around the house — without even being asked! Your parents may also reward you with some money for your hard work. Don’t forget to put some of that money into your savings account at DCU.
7 FUN FACTS ABOUT RAINBOWS

It’s so cool to see a rainbow in the sky after a rainstorm! Here are some facts about the science of rainbows:

1 **Rainbows have more than 1 million colors.** The main colors are red, orange, yellow, green, blue, indigo, and violet. But there are many more hues of color in between!

2 **Not all rainbows appear with rain.** A rainbow happens when light bends through water droplets in the air. This might happen with rain, dew, fog, spray, or mist.

3 **You can’t touch a rainbow.** It’s an amazing sight to see, but not an object you can touch.

4 **Rainbows can multiply.** With a double rainbow, a second rainbow appears above the main one with reversed colors. It’s possible to see triple and quadruple rainbows, too!

5 **The shape of a rainbow is a full circle.** However, what we see usually looks like an arc. The other half of the circle is hidden below the horizon. You might be able to see a full rainbow from an airplane or tall mountain.

6 **Rainbows can appear at night.** An evening rainbow is made by reflecting moonlight instead of sunlight. This is called a moonbow or lunar rainbow.

7 **You can create a rainbow!** Grab a garden hose and stand with your back to the sun. Spray the water up in the air and look for a rainbow.

Have you ever tried to follow a rainbow? You may not have luck finding a pot of gold at the end of a rainbow — but you can keep your money safe in your savings account with DCU!

---

Find the pot o’ gold

Oh no! Liam the leprechaun was busy looking for gold coins and lost his pot of gold at the end of the rainbow. Can you follow the right path to help him find it?

Keep your dollars and cents safe! Deposit your money in your DCU Savings Account.
